

Wadjet Pharmacy

Pharmacy Management System

Presented by

Shaza Walid • Fadel Ibrahim • Mariam Ahmed • Maive Maged

About Us

1

Project Overview

Wadjet Pharmacy is a web-based pharmacy management system designed to simplify the daily operations of pharmacies.

2

Our Goal

Deliver a simple, efficient platform that helps customers and pharmacy administrators manage medicines and orders with ease.

3

Technologies Used

Frontend: HTML, CSS, Bootstrap, JS.

Backend: Laravel(PHP), MySQL.

Why "Wadjet?"

Named for the Eye of Horus — an enduring symbol of healing, protection, and good health. The name connects our healthcare focus with Egyptian heritage.

"Connecting ancient wisdom with modern technology."

Design touches: Egyptian-inspired geometric accents kept subtle and contemporary to respect the modern corporate style.

Project Features — Version 1

Customer Features

- Register & Login
- Browse Medicines
- Search Products
- Category Filtering
- Product Details
- Shopping Cart & Checkout
- Place Orders
- Request Unavailable Medicines

Project Features — Version 1

Administrator Features

- Manage Products
- Manage Categories
- Manage Suppliers
- Manage & Track Orders
- Approve Supply Requests
- Update Medicine Stock

Database Design

Key Entities

- Users (Customers, Admins)
- Products (Medicines, Alternatives)
- Categories
- Suppliers
- Orders
- Order Items
- Availability Requests

The database is organized for clarity, scalability, and straightforward maintenance — normalized tables with clear relationships to support future features.

Future Improvements — Version 2

Low Stock Alerts

Automated notifications for administrators when inventory falls below thresholds.

Expiration Date Tracking

Track expiry dates and flag soon-to-expire items for removal or discounting.

Barcode Support

Fast scanning for receiving, dispensing, and stock auditing.

Sales Dashboard

Visual revenue and inventory KPIs for data-driven decisions.

Email Notifications

Automated order confirmations, supply alerts, and customer updates.

Better Order Tracking

Improved status updates from order placed to delivery completed.

Future Vision — Version 3

AI Medicine Recommendations

Personalized suggestions based on history, allergies, and common prescriptions.

Mobile Application

User-friendly app for browsing, ordering, and tracking deliveries.

Online Payment

Secure integrations for card payments and local payment gateways.

Multi-Branch Support

Centralized management of inventory and orders across multiple pharmacy locations.

Conclusion

The project successfully demonstrates how technology can replace manual processes with a more organized and efficient digital solution.

While Version 1 provides the core functionality, the system is designed to support future enhancements and grow into a complete smart pharmacy platform.

"Inspired by Ancient Egypt, Built for the Future of Healthcare."

Starting as a practical Version 1, the platform is intentionally designed to evolve into a smart, data-driven pharmacy solution.

- ❏ Next steps: prototype Version 2 features, user testing with partner pharmacies, and integrate analytics for continuous improvement.

Thank You

Thank you for listening.
